

## PBJ's Beach Fence v1.0

To install:

Extract the folder "PBJBeachFence" to Your RollerCoaster Tycoon® 3 Directory>Style>Themed. Be sure you do not change the name of the file and have placed the folder in the correct location or the set will not function properly within the game.

A few notes about the set:

Most of the fences appear in the walls menu, but the grass and conforming fences appear in the flowers menu. I have done everything possible to minimize any lag experienced by using the grass. However, if the grass is used abundantly and viewed up close, a minor reduction in game frame rate may be noticed. This may or may not be true for all, but in my own testing, this is what I experienced.

Enjoy,

PB&J
